

Steel Formed Sections Ltd is committed to be an industry leader in our environmental performance and is dedicated to sourcing the raw materials for our products under the guidelines of the Sustainability Standard BES 6001- Framework Standard for the Responsible Sourcing.

Management, employees and suppliers have committed to follow the following principles of our Responsible Sourcing Policy:

Community and Corporate Responsibility

Commit to integrity and openness in forging sustainable relationships with all stakeholders. Communication with the local community, employees and suppliers is a key element of this strategy. This includes a commitment to:

- Being good neighbors through engaging and positively supporting the local community to make positive social contributions where possible;
- Providing a safe and healthy workplace for all employees, contractors and visitors and aim for a Zero Accident environment;
- Building environmental and economically sustainable partnerships with suppliers. We encourage raw material suppliers to challenge their suppliers on these principles also.

Environmental Stewardship

Commit to protecting the environment by using best available techniques and sustainable processes in the operation of the manufacturing facility. Where possible, the key challenge of climate change should be addressed through the reduction of greenhouse gas emissions: This principle also includes:

- Using “Green Energy” sources to reduce reliance on fossil based finite resources where possible;
- Target minimal landfill waste generation from the manufacturing process through following the waste hierarchy model;
- Comply with all State Legislation and Environmental Regulations and develop and foster a working culture of performing ‘above and beyond’ the statutory requirements.

Signed
